Fly Tying Fishing Tools

 **ACUMED**
International Co.
Serving Healthcare Worldwide Since 1984

DID YOU KNOW?

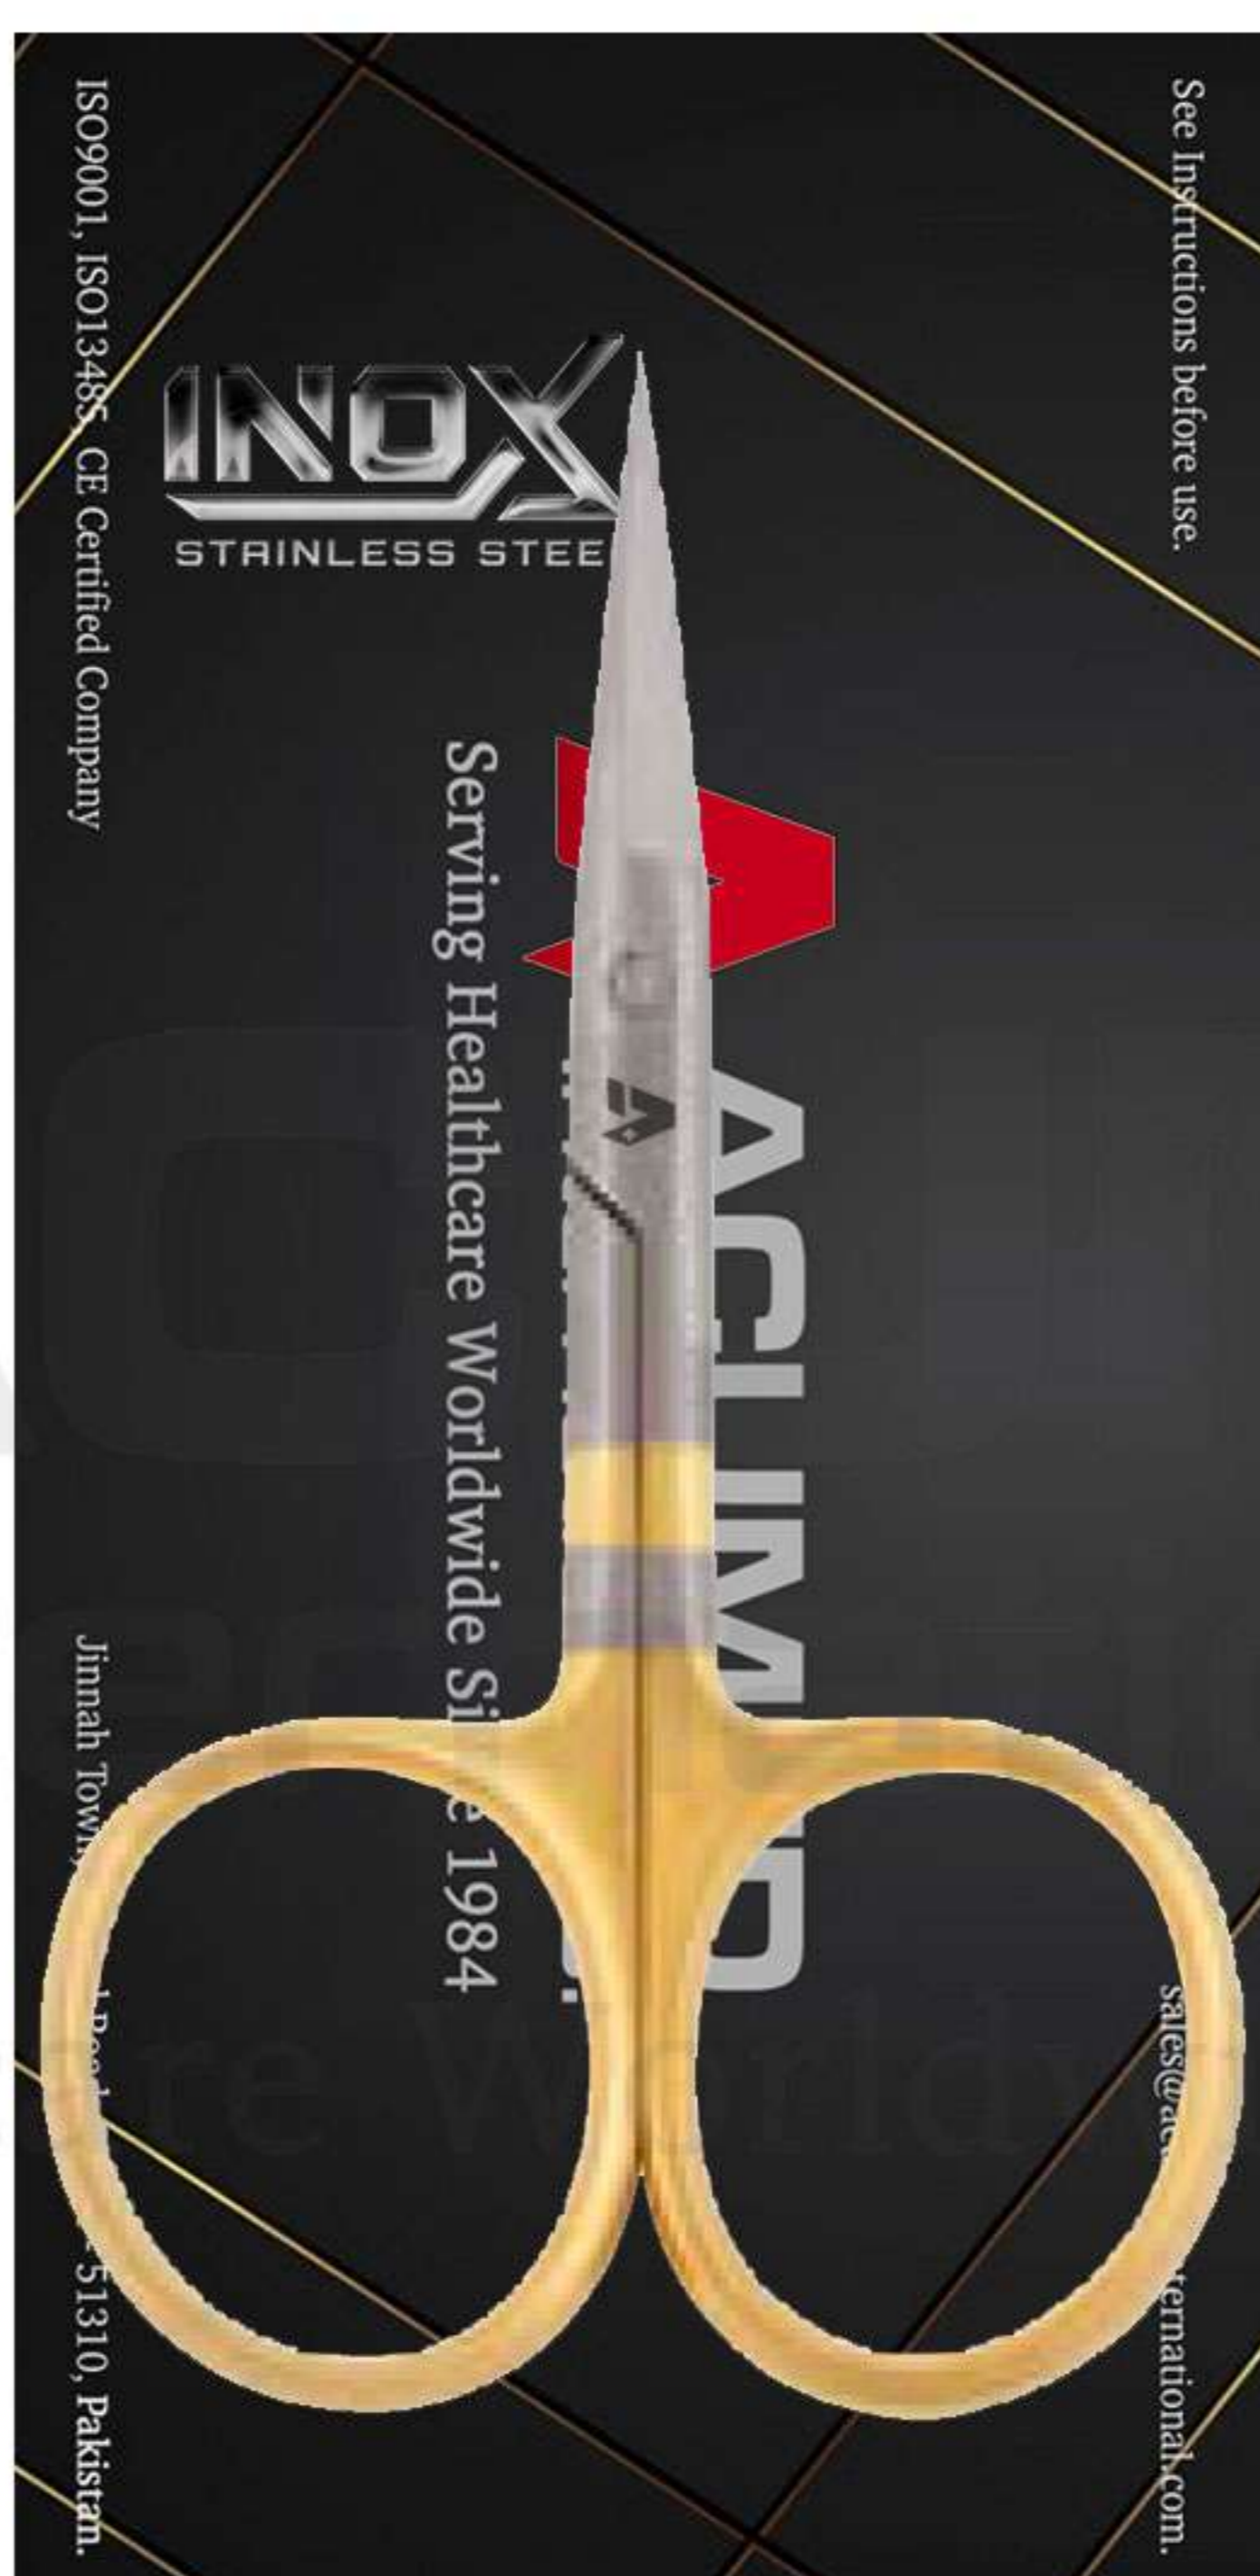

ACUMED scissors are best the choice of fly tyers worldwide. Whether you are new to fly tying or a hardened production tyer, ACUMED scissors will maximize your fly tying enjoyment, production and quality.

Selection of Scissors

For maximum performance and longer scissors life, two main rules apply when choosing scissors for tying, The first is to match the scissor to the types of material you tie with most often, most scissors in the ACUMED line can handle both natural and synthetic material with ease, but if you tie predominantly with synthetic material, consider the new generation of scissors link Tungsten Carbide, Razor and Prism that are designed to handle these materials. Second is to match the scissor to the size and type of flies you tie. If you tie small flies without much mass or material, use small finer blade scissors like Arrow, MicroTip, and Iris. Conversely, if you tie larger flies, with more mass and material, consider larger scissors with heavier blades like all purpose, Hair or Razor. Great Scissors make great flies.

Arrow Scissors
AF-01-01
3.5 Inches

All Purpose Scissors
AF-01-02
4 Inches

Hair Scissors
AF-01-03
4.5 Inches

20 year of research and development have proven that the 3.5 inches Arrow, 4 inches All Purpose, and 4.5 inches Hair Scissors frames are the optimum length and blade style for most fly tyers. Whether you tie with scissors in hand or pick up and put down, these scissors make tying easier and more efficient. The big three frame styles are also used in the Tungsten Carbide, Micro Tip, Prism, Bent Shaft and twisted Loop series.

Arrow Scissors: 3.5 inches Straight or Curved Serrated Blades

Short fine bladed scissor designed for small flies and detail work. The notch at the base of the blades is designed for cutting wire and lead. Excellent for natural material and can handle most synthetics. Great scissor for in-hand tyers.

All Purpose Scissors: 4 inches Straight or Curved Serrated Blades

The name says it all! Medium length with blades designed for small, medium and large flies. The one to have in your travelling kit. Excellent for natural materials and can handle most synthetics.

Hair Scissors: 4.5 inches Straight or Curved Serrated Blades

Long heavy blades are designed for large flied and tough material. If you work with hair or other heavy materials, this is a true workhorse. Excellent for natural material an can handle most synthetics.

Tungsten Carbide Scissors - Straight Non-Serrated Blades

All our scissors are available with Tungsten Carbide Blades welded on the scissor blade frame. Tungsten Carbide is 7 x harder than stainless steel and holds an edge longer. These can handle all types of tying materials, but were created to tackle modern synthetic materials.

Razor Scissors - Straight Serrated Blades

Possibly the sharpest scissor ever created. Think razor blades with handles. These thin blades with a razor edge make short work of all materials. Adjustable tension allows for loosening or tightening as materials warrant. Cuts through natural and synthetic materials like butter. Made from 440C grade Stainless steel. These are the ultimate tying scissors.

Bent Shaft Scissors - Straight Serrated Blades

This series is based on a simple concept. Picking flat scissors up from a flat surface is no fun, and sliding them across your bench to get them in your hand is a time killer. By placing a bend in the middle of the scissor, the problem of picking up is solved. Handles are performs just like a regular straight scissor. Excellect with natural materials and can handle most synthetics.

Bent Shaft Scissors

AF-01-01BS	3.5 inches	Arrow Scissor
AF-01-02BS	4.0 inches	All Purpose Scissor
AF-01-03BS	4.5 inches	Hair Scissor

These bent shaft scissors are available in all model series Scissors like Tungsten Carbide Scissors, Micro Tip Scissors, Titanium Coating Scissors. Just mention your desired series scissors in the bent shaft model at the time to place an order.

Iris Scissors - Straight or Curved Serrated Blades

The Classic! Most of us started with Iris Scissors and they have stood the test of time. Thin blades and hypodermic tips make these ideal for small flies and detail work. Excellent with natural materials and can handle most synthetics.

These scissors are also available with Tungsten Carbide Blades Just add "TC" after the code to order tungsten carbide blade iris scissors.

Iris Scissors

AF-01-07	4.0 inches	Curved

Open Loop Scissor - Straight Serrated Blades

Malleable loops allow you to custom contour the scissor loops to your fingers. Excellent with natural materials and can handle most synthetics.

Available in PVC and LPC

Open Loop Thinning Scissor		
Reference No.	Size	Type
AF-01-08	4.0 inches	Straight

Different Colors are available on loops

Open Loop Thinning Scissor - Straight Serrated Blades

Same malleable loops as above but with a thinning blade. Ideal for softening hard outlines on flies by cutting alternate lengths and amount of material. Excellent with natural materials and handles most synthetics.

Open Loop Thinning Scissor		
Reference No.	Size	Type
AF-01-09	4.0 inches	Straight

Spring Scissor

Straight and Curved Serrated Blades

The ultimate one hand wonder! No loops, just squeeze the spring arms together & the blades cut. Great scissor for detail work and in-hand tying.

Excellent with natural materials and can handle most synthetics.

Spring Scissor

Reference No.	Size	Type
AF-01-10	4.0 inches	Straight
AF-01-11	4.0 inches	Curved

INOX
STAINLESS STEEL

Synthetics Scissor

Straight Serrated Blades

Designed for cutting heavy natural and synthetic materials. Heavy Blades with large serrations for cutting tough stuff like glo bug yarn, foam, leather, plastic, bead chain, lead, wire and mylar. A must for all tying benches.

Synthetics Scissor

Reference No.	Size	Type
AF-01-12	5.0 inches	Straight

Braid Scissor

Straight non-Serrated Blades

Great little scissor designed to cut the new age braid and synthetic lines. If you use braid for backing or terminal tackle, this is a must. I use braid to attach stinger hooks to my large streamers... so naturally I have this scissor handy on my bench.

Braid Scissor

Reference No.	Size	Type
AF-01-13	4.0 inches	Straight

Preparation Scissor

Straight Serrated Blades

This is the big dog in terms of cutting anything you can bring to the tying bench! Very heavy blades with large serrations and a wire cutter for tackling the nastiest stuff in Fly Tying Town. Specifically designed to handle all the heavy new tying materials. Easily handles the macro work on big, thick sheets of foam, heavy leather and yarn for glo bugs, lead, wire, antron, rubber, flash, chenille, latex, tubing, braid, darlon and the list goes on. The mother of all Scissors.

Preparation Scissor

Reference No.	Size	Type
AF-01-14	4.0 inches	Straight

Finishing Scissor

Straight non-Serrated Blades

This spring-loaded scissor with finger loop is designed for one hand operation. Great for in hand tying and detail work. If you are a rod builder, this is the scissor for you as it can easily cut silk and nylon wrapping thread. Excellent with natural materials and can handle most synthetics.

Finishing Scissor

Reference No.	Size	Type
AF-01-15	5.0 inches	Straight

Clamps

Clamps are designed for a myriad of tasks like crushing brabs, removing hooks from fish (or yourself!) opening/closing split shot, knot-tying, cutting tippet, etc. Knowing what tasks you regularly perform stream-side will help you select the clamp(s) that best suit your angling needs. Clamps tend to be a very personal item, and like a favourite rod or reel, people have preferences for their clamps. Some anglers like short clamps and others prefer long. Some like straight jaws while others prefer curved. Many like the gold loops/handles and others prefer the stealth-mode black. So, if you lose your buddies 5" curved black clamp, don't assume the 4" gold loop straight model you give him off your vest will clear the air.

Standard Clamps

Half Smooth and Half Striated Jaw Structure

These clamps are available in 4", 5", 5.5" and 6" with different colors finishing goold loop, black finish, blue finish, and multi finish. All the most popular sizes are 4" and 6". Designed to handle all your streamside tasks like hook removal, barb crushing, and closing shot.

Standard Clamps		
Reference No.	Size	Type

Barb Clamps

Straight Smooth Jaw Structure

Short with powerful shanks and smooth jaws, this clamp can handle all streamside tasks, but really excels at barb crushing.

Reference No.	AF-02-09
Size	4.5 inches
Type	Straight

Spring Creek Clamps

Straight or Curved Smooth Jaw Structure

This is one of the favorites of the ACUMED crew. Needle nose jaws allow this clamps to be used with #26 midges all the way to #6 buggers. Smooth jaws make crushing barbs on the smallest files easy.

Reference No.	AF-02-10
Size	5.0 inches
Type	Straight

Reference No.	AF-02-11
Size	5.0 inches
Type	Curved

All our clamps are available in Soft Grip Rubber Handles, and available in different colours. For order Clamps with soft grip just add "SG" after the code, and mention your desire color.

Long Range Clamps

Straight or Curved Jaws, Half Smooth and half serrated jaw structure

Not for the faint of the heart! These clamps are designed to manhandle big flies and keep gnashing teeth and loose treble and fly hooks at a safe distance. Perfectly at home in fresh and salt water. Long heavy duty shanks and short powerful jaws make short work of deep hook removal, big barb crushing, and closing shot. Really handy when removing double fly rigs or stinger setups from fish. Great alternative to traditional pliers.

Mathieu Clamps

Straight Jaws, Half Smooth and half serrated jaw structure

Extremely popular alternative to traditional loop and ratchet clamps. Simply squeeze the clamp all the way through the ratchets to release. To close, squeeze until the ratchets lock. Also excellent for cold weather fishing where gloves or mittens are the norm, or for tangling with big fish.

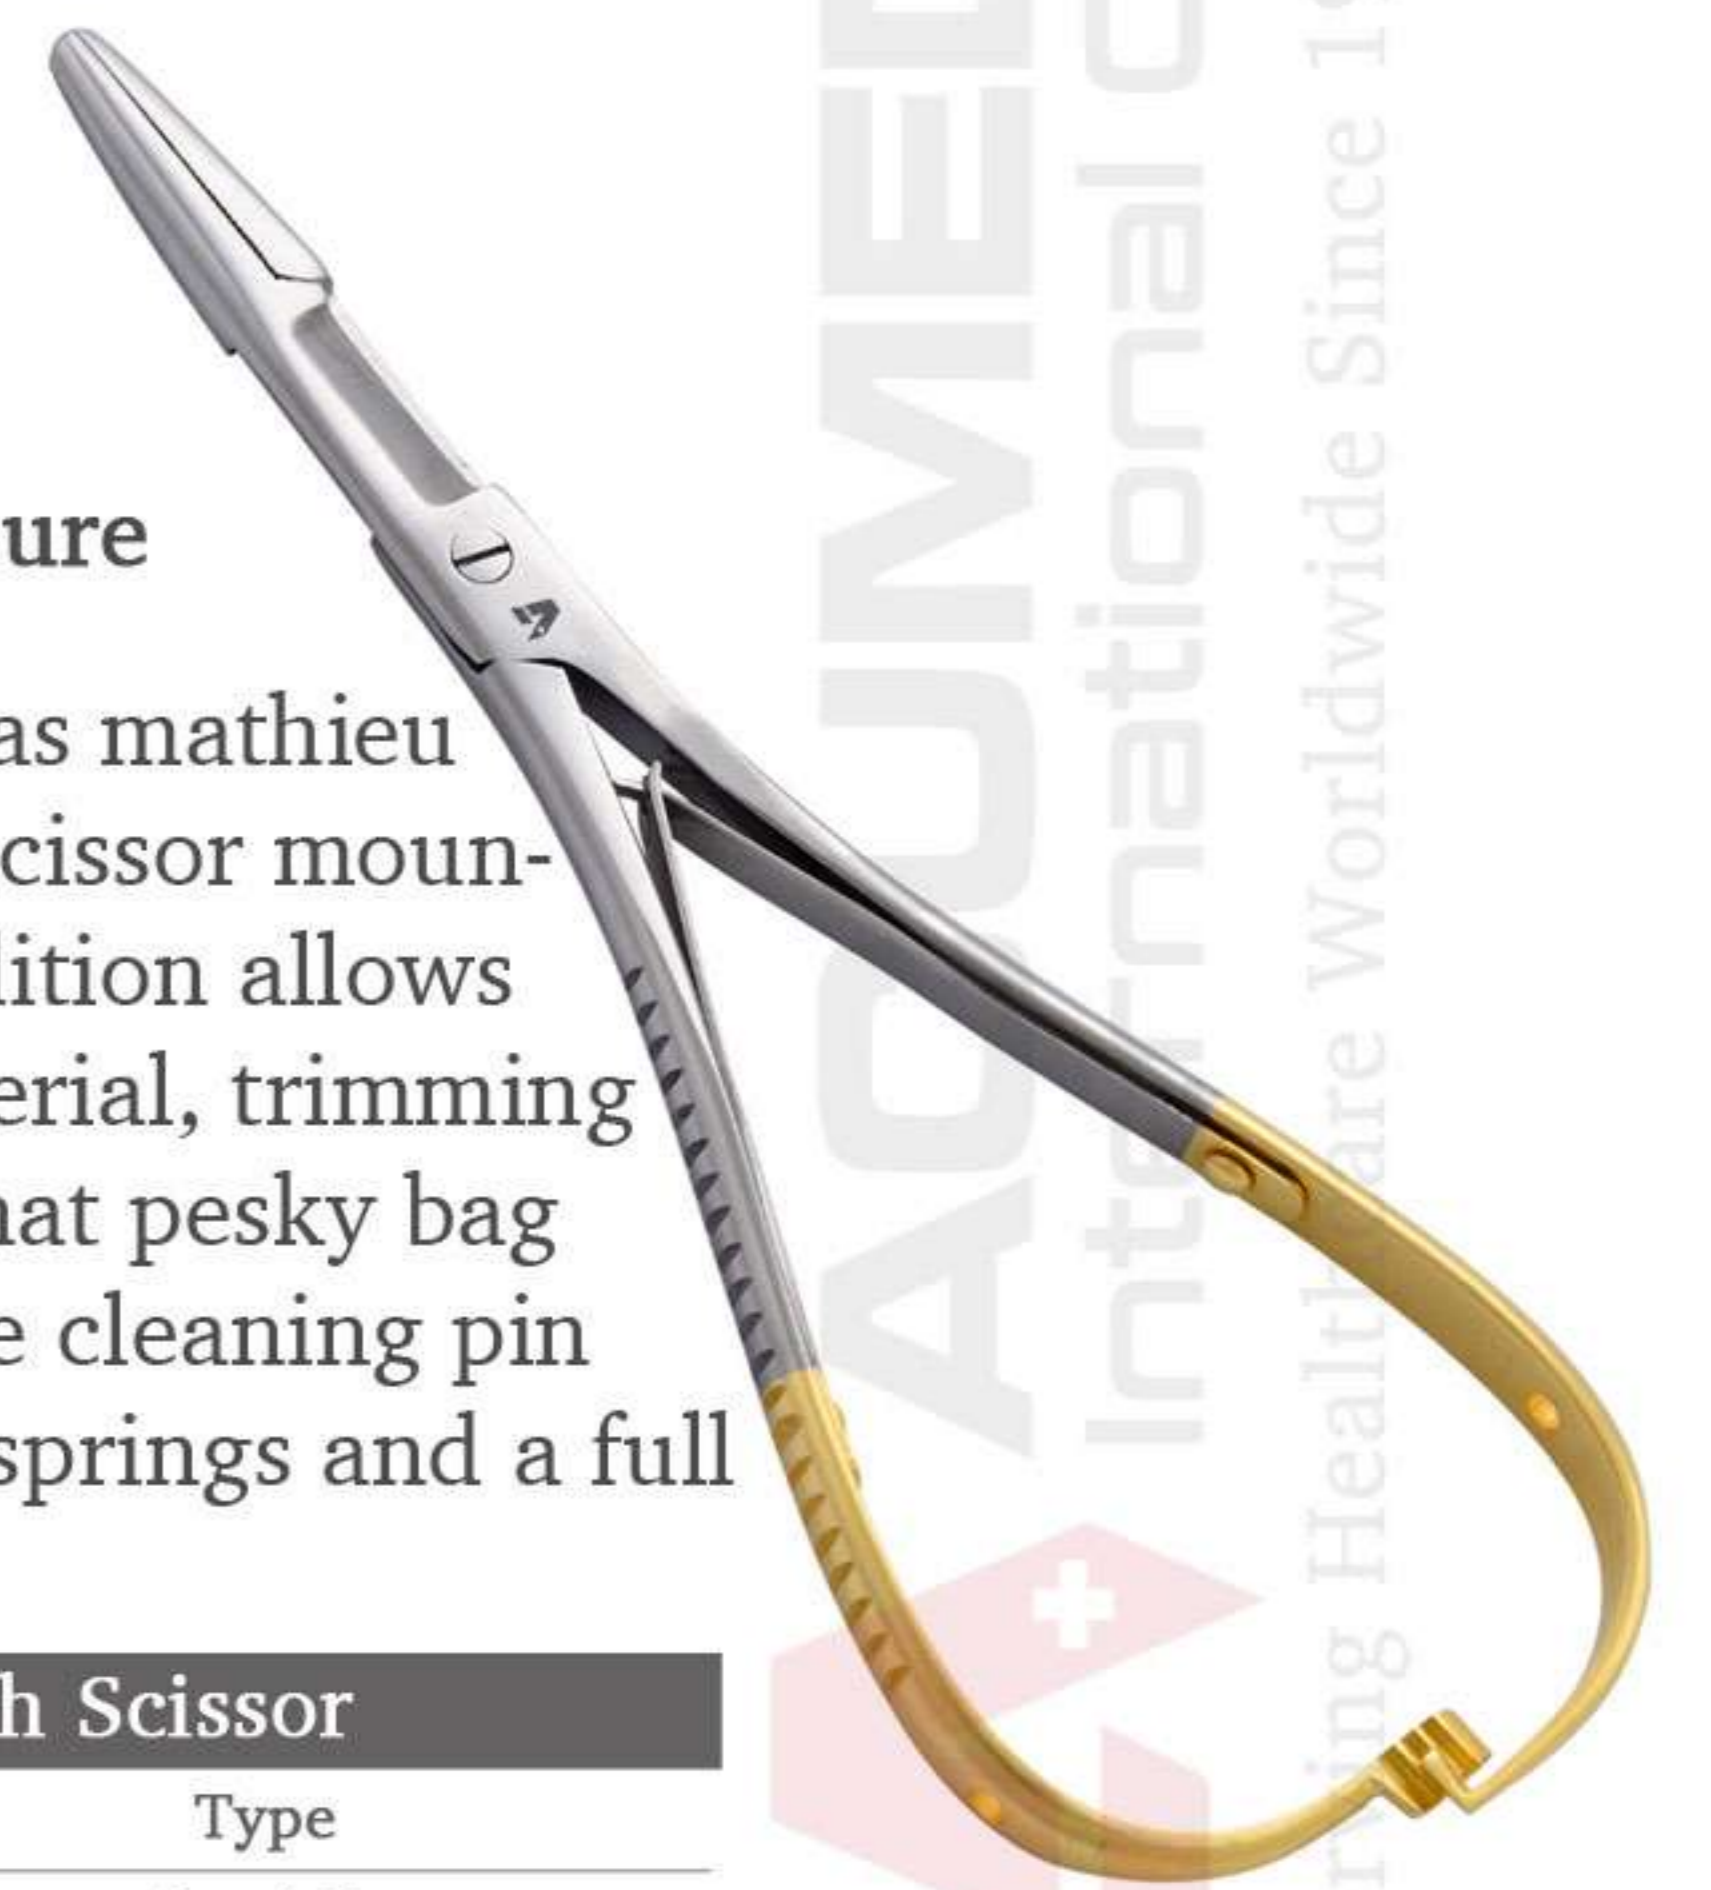

Mathieu Clamps		
Reference No.	Size	Type
AF-02-18	5.5 inches	Straight
AF-02-19	6.5 inches	Straight

Mathieu Clamps with Scissor

Straight Jaws, Half Smooth and half serrated jaw structure

Same one handed operation as mathieu Clamps, but with a serrated scissor mounted behind the jaws. This addition allows for cutting tippet/leader material, trimming flies streamside or opening that pesky bag of jerky. Comes with hook eye cleaning pin in the jaw, dual self-opening springs and a full swivel bungee lanyard.

AF-02-21	6.5 inches	Straight

Twisted Loop Clamps

Standard, Spring Creek and Scissor Clamps,.

Please mention the clamp type you required at the time of order.

All type clamps can be manufactured in Twisted Loop Clamps. A truly groundbreaking series of clamps. By offsetting one loop and installing a gap between the loops, we have created a more ergonomic clamp with better control, dexterity and crushing power. These clamps can easily handle all streamside tasks. FYI, your thumb goes in the standard loop.

Scissor Clamps

Half Smooth and half cross hatch jaw structure

The most versatile series we make and able to handle all streamside tasks. Serrated scissor for cutting tippet/leader material, trimming flies or performing streamside surgery. These clamps are used to sew up lacerated anglers or remove hooks from every imaginable place on the human body. We also added a straight edge screw driver for streamside reel and boat repair or in my case re-attaching a license plate. This is the closest item we make to a multi tool.

Mathieu Clamps		
Reference No.	Size	Type
AF-02-22	4.0 inches	Straight
AF-02-23	5.5 inches	Straight
AF-02-24	6.5 inches	Straight

Barb Crusher Scissor Clamp

Straight Jaws Smooth Jaw Structure

Designed to crush barbs and work with small flies. This clamp features a heavy serrated box blade scissor for cutting really stout materials. A smooth-jawed more powerful version of the popular scissor clamps.

Barb Crusher Scissor Clamp

Reference No.	Size	Type
AF-02-25	4.75 inches	Straight

BOBBINS

3", 4" or 4.75" Frames

Bobbins are the critical tool in tying since they must keep smooth tension on the thread spool and have super smooth inserts to apply the thread to your fly. To this end, we have created three series of bobbins that handle these tasks with ease. All have delrin feet for smooth tension on the thread spool, and have either dual glass, ceramic, or titanium oxide inserts for smooth application of thread to fly. These funnel shaped inserts allow for a smoother application of thread or other materials as the bobbin is rotated, and they cause less breakage than traditional pipe or straight edged inserts.

FLY TYING TOOL MATERIALS

Most of our fly tying tools are available in several finishes. Each finish has its own unique properties and aesthetic to suit your individual taste.

Brass

The classic. Very smooth action, 5 mm diameter handle.

Stainless Steel

Very smooth action, heavier and stronger than brass, 5 mm diameter handle. (400 grade stainless steel)

Bamboo

Very smooth action, lightweight, renewable, large 7 mm diameter handle.

Aluminum

(Jumbo Tools) Very smooth action, lightweight, large 10 mm diameter handle for easier grip and pickup.

BOBBIN THREADERS

5" and 5.75" Jumbo

Pull thread through the bobbin tube.
Built-in half hitch tool.

BOBBIN THREADERS

5.5" and 7" Jumbo

Used to apply head cement, tease materials on a fly, or execute a half hitch.

WHIP FINISHERS

4", 5" Jumbo, and 6"

Quickest way to finish off your fly and give it a professional appearance. Use 4" or 5" models for small to medium flies or the 6" model for larger flies. Built-in half hitch tool.

DUBBING TOOLS

5" Hooks, 5" Jumbo Hook, 4.5" Jumbo Twister, 4" Turbo Hook, 2" Twister, 6" Comb and Brush

Used to apply threaded dubbing materials to the body of a fly. DC6 has Velcro comb (light material) and brass brush (heavy material) that create a perfect bead of dubbing when raked through dubbing materials.

HP pliers

HPNS pliers

HACKLE PLIERS

Non-rotary: 2.25" and Rotary: 2", 3.75" Jumbo, or 4"

Non-rotary is best for simple application of hackles to flies. Use rotary when working with parachute flies. A half hitch tool is built into the handle of the rotary pliers.

HALF HITCH TOOLS 3"

Four half hitch openings cover hooks. Set of 2

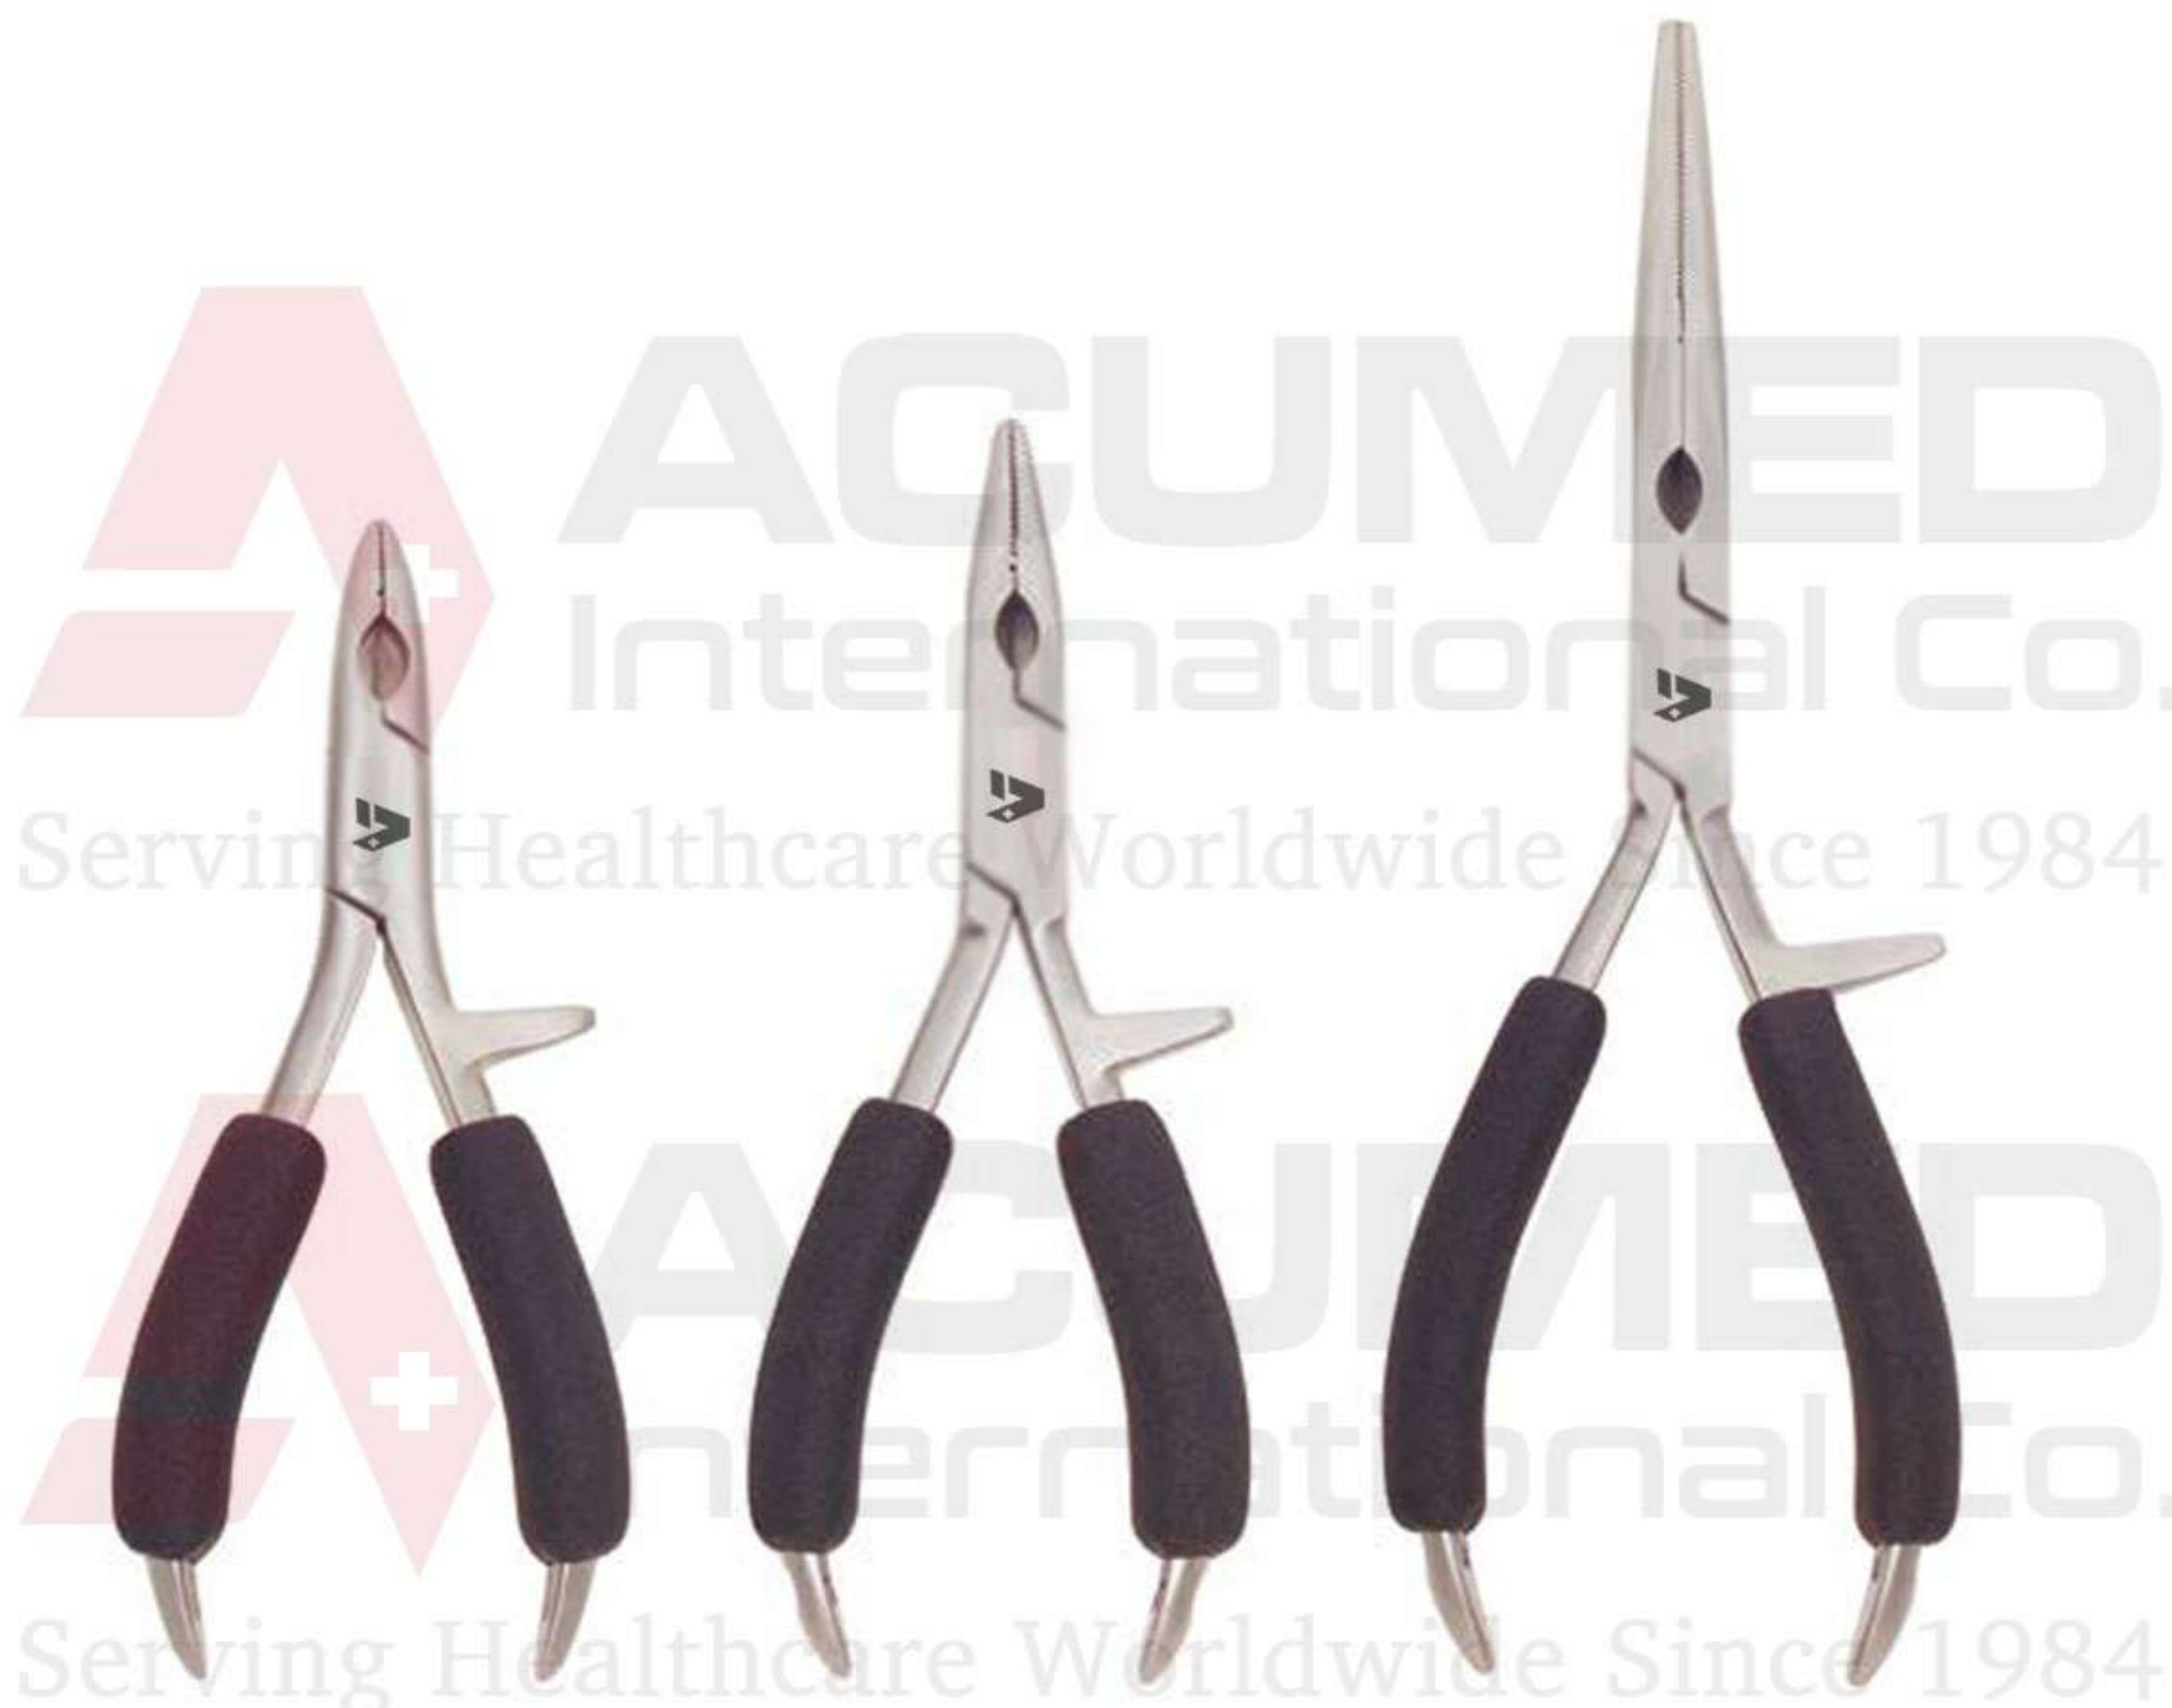

PLIERS WITH CUTTERS

Whether you fish the ocean, lakes, rivers or ponds, we have the pliers you need to handle big flies, tough lines, and large fish. When angling in salt water, consider using aluminum pliers or pliers with a black oxidized finish for added protection against the elements. For longevity, rinse your pliers in fresh water and apply a little oil.

BULLET HEAD, CHAIN NOSE AND BARRACUDA PLIERS

5.5" Bullet Head, 6" Chain Nose and 8.5" Barracuda; satin or black finish

These pliers are designed with side cutters for cutting monofilament and light wire up to 20 lbs. Each plier has side cutter demarcation lines to easily locate cutters. All three have an aggressive jaw structure that is designed to mash barbs and crush copper leader sleeves. Each model has an anti-slip knob designed to keep your hand from sliding down into a toothy creatures mouth. All three come with comfortable foam grips, a full-swivel coiled bungee lanyard, and a molded clip-on swivel holster. Excellent for fresh and saltwater angling. Bullet Head has a short paddle shaped jaw, Chain Nose has a needle nose jaw and the Barracuda plier has long-reach jaws for the added comfort that only distance from gnashing teeth can provide.

AF-04-01

AF-04-02

AF-04-03

HOOK FILES

Sharp hooks are critical for angling success, and regardless of what you are told, all hooks will need sharpening from time to time. Our two-sided hook files feature dual sharpening grooves for honing hook bottom and point as well as flat areas for side sharpening of points. Hook files are constructed of stainless steel with dual diamond grit surfaces and textured rubber grip. 4" model has a fine side (600 grit pattern) and medium side (300 grit pattern), while the 6" model has medium (300 grit pattern) and heavy (150 Grit pattern).

AF-04-04

AF-04-05

NIPPERS

One of the most heavily used and critical tools for your vest or bag. Designed for snipping tippet tag ends, clipping off flies, cutting leader material, cleaning hook eyes, sharpening hooks, or tying nail knots, these nippers are the workhorses of the fishing world. All nippers are 2" and have super sharp blades, an industrial strength hook eye cleaning pin, and a built-in hook file. Knot-tying models have an easy-to-use nail knot tube attached.

AF-04-07, AF-04-08

Innovative offset or slanted blade face is designed to work in tight to flies and snip tag ends of tippet without cutting hackles or materials.

Bobbin

Scissors

Clamps

TWEEZERS

**Bishop - 4",
Straight or Curved jaw**
Indispensable on the bench for picking up hooks, hackles or beads. Great for holding materials in place when tying a fly.

AF-04-19 - Straight
AF-04-20 - Curved

TWEEZERS

**Bead Tweezer
4"**

Unique arrowhead design allows these self-closing tweezers to grip any size beads or cones. Non-slip rubber pad on one jaw makes it easy to pick up tiny beads and protects against breakage of glass or plastic beads..

AF-04-21

TWEEZERS

**Extra Hand
2.25"**

Super versatile bull dog, self-closing design. Can be used for a myriad of tasks on the tying bench, but really excels on your vest or in a fly box. I keep one on a retractor and use it to select #20 flies from my midge box and then let it hang while I repack the box. No need to transfer fly to patch. Extra Hand says it all.
